Supervisory Patent Examiner, Art Unit 2432

***Allowable Subject Matter***

1. Claims 1-3 and 5-8 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reasons for the allowance of the independent claims 1, 5 and 6 are the inclusion of limitations that are not found in the prior arts and they are uniquely distinct features. The closest cited prior art March et al (2003/043740 A1). March et al discloses a system for use in communications between a first network and an external network comprises a storage module to store a pattern or threshold for a communications session. March et al further discloses a controller that is adapted to deny further entry of data units from the external network to the first network in the communications session in response to the controller detecting that a rate of incoming data units exceeds the threshold or the incoming data units do not match the pattern

However, March et al fails to anticipate or render the following unique limitations of the independent claims in the instant invention:

"Claim 1: aggregating said INVITE messages and said 180 Ringing messages for all users on said Internet accessible network."

"Claims 5 and 6: means for aggregating said INVITE messages and said 180 Ringing messages fro all users on said Internet accessible network."

3. The dependent claims 2, 3, 7 and 8 are allowed because they were originally found to include a unique feature not found in the closest abovementioned art.

***Conclusion***
